Skills

Junior Front-End Developer with a foundation in HTML, CSS, and JavaScript. My journey, previously marked by a decade of work as an engineer on container vessels, has become a valuable experience that I now leverage in creating interactive and visually appealing solutions. Closing the chapter of my maritime career, I enthusiastically step into a world where my ideas can take shape and inspire others. I strive for creative projects that spark interest and help me grow as a professional.

Key Skills:

- **HTML & CSS:** Proficient in building well-structured and responsive web pages with clean code.
- **JavaScript:** Hands-on experience with vanilla JavaScript for interactive elements and enhancing user experience.
- **Masters.js:** Integrated JavaScript libraries like Masters.js to create physics-based interactive animations (e.g., falling objects that shatter upon impact).
- **Version Control (Git):** Familiar with Git for tracking code changes and collaboration.
- **Google Cloud Deployment:** Configured and deployed web applications on Google Cloud servers, including setting up server environments.
- **Responsive Design:** Ensured web pages are optimized for various devices and screen sizes.
- **Docker:** Containerized applications using Docker for easier deployment and consistency across environments.
- **Basic Python:** Gained experience during university projects and personal research.

I aim to further develop my programming skills and am particularly interested in learning more about React, backend technologies, and modern JavaScript frameworks.

Work History

2024-07 -
Current

UpWork Freelancer

Tbilisi, Freelancer (Remote)

- Developed websites using HTML and CSS.
- Integrated the JavaScript library Masters.js to create interactive effects (e.g., object animations with realistic physics).
